

M. Jean-Paul Gauzès President of the EFRAG Board 35 square de Meeùs B61000 Brussels Belgium

Paris, January 29, 2021

Draft endorsement advice of IFRS 17

Dear M. Gauzès.

The Institut des actuaires (the French public interest association representing 4 500 actuaries) welcomes the EFRAG's invitation to comment on the draft endorsement advice on IFRS 17.

The work carried out by EFRAG in recent years has been very useful in assessing the relevance of the IASB's proposals for the future financial reporting of insurance contracts. We appreciate the effort made to understand and analyze the views expressed by the various stakeholders.

For more than 10 years, the Institut des actuaires shared its comments (IASB, EFRAG) at every stage of the development of the standard. We believe that the amended version of IFRS 17 – except for the annual cohorts' requirement – is an improvement compared to both its previous version and IFRS 4.

Nevertheless, we have strong concerns about the annual cohorts' requirement which fails to give a relevant representation of the French life insurance business. This misrepresentation of intergenerational sharing of risk will affect more than €1600 billion in provisions on the French insurance market! For the concerned insurance contracts, this requirement leads to an artificial representation of performance, which is arbitrary and not useful for financial statement's users. In addition, it generates significant implementation costs. Since the IASB rejected the solutions proposed, we believe that this issue should be addressed in the European endorsement process and not be postponed to the Post-Implementation Review.

We consider that the annual cohorts' requirement should be removed for contracts eligible to the variable fee approach that share a significant part of the return on common underlying items across generations. Therefore, we support the French accounting standards setter (ANC) proposal:

An entity could elect to not apply the annual cohort requirement to a group of contracts that meets the three following criteria:

- a. the group of contracts only includes contracts with cash flows that affect or are affected by cash flows to policyholders of other contracts as described in paragraphs B67–B71 of IFRS 17;
- the contracts in the group jointly participate in a share of returns on a clearly identified common pool of underlying items. Contracts jointly participate when the entity exercises discretion in relation to the timing and allocation of the total policyholders' profit share to individual policyholders; and
- c. the contracts in the group are insurance contracts with direct participation features as specified in paragraph B101 of IFRS 17—accordingly, the VFA model applies to those contracts.

Finally, we support the implementation of IFRS 17 – with an appropriate solution to the annual cohorts' issue for the intergenerationally mutualized contracts - on 1st January 2023

Our responses to your invitation to comment have been included in the Appendix.

We hope you'll find these comments useful. Do not hesitate to contact us if you wish to discuss any of the issues raised.

Yours sincerely,

Philippe Talleux President

2

Pierre Thérond
President of the Accounting and
Financial Reporting Committee

Part I: EFRAG's initial assessment with respect to the technical criteria for endorsement

pierre@therond.fr; samuel.cywie@institutdesactuaires.fr

Note to the respondents: Appendix II presents EFRAG's reasoning with reference to all requirements in IFRS 17 apart from the application of the annual cohorts requirement to some contracts specified in paragraph 6 of Annex A within Annex 1 (those contracts are conventionally referred to in this questionnaire, in the Cover Letter, in its Appendices and Annex as 'contracts with intergenerationally mutualisation and cash-flow matched contracts', or 'intergenerationally mutualised and cash flow matched contracts'. Annex 1 presents content of this requirement that contribute positively or negatively to the technical criteria on this matter.

- 2 EFRAG's initial assessment of IFRS 17 is that:
 - The EFRAG Board has concluded on a consensus basis that, apart from the requirement to apply annual cohorts to intergenerationally-mutualised and cash-flow matched contracts, as explained in the attached Cover Letter, on balance, all the other requirements of IFRS 17 meet the qualitative characteristics of relevance, reliability, comparability and understandability required to support 'economic decisions and the assessment of stewardship and raise no issues regarding prudent accounting. EFRAG has concluded that

¹ For a description of the affected contracts please refer to paragraphs 8 to 28 of Annex A to Annex 1 of the endorsement package relating to IFRS 17.

all the other requirements of IFRS 17 are not contrary to the true and fair view principle.

- EFRAG Board members were split into two groups about whether the requirement to apply annual cohorts to intergenerationally mutualised and cashflow matched contracts meet the qualitative characteristics described above.
 - (i) Nine EFRAG Board members consider that overcoming in a timely manner the issues of IFRS 4 brings sufficient benefits despite the concerns on annual cohorts. They believe that, in the absence of an alternative principles-based approach to grouping of contracts, on balance the annual cohorts requirement provides an acceptable conventional approach that enables to meet the reporting objectives of the level of aggregation of IFRS 17.
 - (ii) Seven EFRAG Board members consider that in many cases in Europe the requirement to apply annual cohorts for insurance contracts with intergenerational mutualisation and cash-flow matched contracts will result in information that is neither relevant nor reliable. This is because the requirement does not depict an entity's rights and obligations and results in information that represents neither the economic characteristics of these contracts nor the entity's underlying business model. These EFRAG Board members also consider that this requirement is not conducive to the European public good because it (i) adds complexity and cost and does not bring benefits in terms of the resulting information, (ii) may lead to unintended incentives to change the way insurers cover insurance risks and (iii) may produce pro-cyclical reporting effects.

EFRAG's reasoning and observations are set out in Appendix II, Annex 1 and the Cover Letter regarding endorsement of IFRS 17.

Do you agree with this assessment for all the other requirements of IFRS 1 apart from the requirement to apply annual cohorts to intergenerational mutualised and cash-flow matched contracts?	
⊠ Yes □ No	
If you do not agree, please provide your arguments and what you believe th implications of this could be for EFRAG's endorsement advice.	ie
	apart from the requirement to apply annual cohorts to intergenerational mutualised and cash-flow matched contracts? ☑ Yes ☐ No If you do not agree, please provide your arguments and what you believe the

Except for the provisions relating to annual cohorts, we globally agree with this assessment.

Nevertheless, we would like to share some concerns regarding accounting for reinsurance contracts applying IFRS 17.

Overall, we believe that the strong economic link between the reinsurance transaction et the business ceded should be better represented. We identified some significant accounting mismatches, especially for reinsurance arrangements concerning insurance contracts eligible to the variable fee approach. The extension of the risk mitigation option was welcome but did not solve this issue. We believe that reinsurance contracts held should be accounted for under the VFA model when the underlying contracts are measured under that same model.

With regard to issued reinsurance contracts, we do not understand why contracts which share the characteristics of contracts with direct participation

features should not be eligible to the VFA model. This case is far from being hypothetical. In the French insurance market, many reinsurance arrangements provide a share of the return on the underlying items between the direct insurer and the reinsurer.

(b) Having considered the technical arguments for those that support and those that oppose the application of annual cohorts to intergenerationally-mutualised contracts, as described in Annex 1, and having considered the two views from the EFRAG Board above does the requirement to apply annual cohorts to intergenerationally-mutualised contracts (within the context of paragraphs B67-B71 of IFRS 17) meet the qualitative characteristics described above? Please explain your technical reasons for supporting your view.

☐ Yes ☐ No

Under IFRS 17 the current estimates must be market consistent. The projections are made in such a way that all contracts that participate in the same underlying elements are retained. The first problem that arises is that the current market consistent estimate is made based on all the participating contracts. In addition, a second problem arises, which is the management of the investments that are made in this level of aggregation (e.g. general fund). So, the projected flows depend on the underlying investments and other contracts that jointly participate in the profits of the underlying investments.

IASB has decided to keep the same level of aggregation in the general model for the VFA model while adding the possibility of allocating between the different groups of contracts, the Fulfilment Cash Flows (FCFs) determined at a high level of aggregation and allocating the variation of the underlying elements to each group. Conventionally this is good because it is not based on economic representation at the group level. But this poses some problems, particularly with regard to the evolution of the CSM, because if there is a loss at the group level, it will be recognized immediately, whereas the expected profits established are in line with the rate of transfer of the service. Furthermore, the rate of income allocation between groups is heterogeneous, and an increase in the fair value of the underlying assets will be identified more quickly if it is a group of older contracts than a group of recent contracts.

Thus, the valuation measure of the FCF is Current Estimate Market Consistent which considers the elements. The business model for life insurance in euros practiced in France is such that there is a common management of the general assets. However, this poses a problem at the level of aggregation with the IASB's level of aggregation because the mechanics of the VFA at the level of groups of contracts fail to represent the life insurance business model correctly, leading to an arbitrary allocation. There is a collective right to general assets between policyholders. Particular policyholders have no individual contractual rights to any subset of the underlying items. Thus the development of the CSM into VFA, which consists in identifying the fair value variations that come up against the problem of the allocation of investments or the allocation of the fair value representing neither the rights of the policyholders of the group of contracts, nor the business model.

In addition, the Current Estimate Market Consistent projects all insurance contracts participating in the same fund. The valuation is therefore at a higher level than the one recommended by the IASB, and if we change this valuation

level of aggregation, we will end up with something inconsistent, i.e. we will have an arbitrary and irrelevant allocation for investors. This would also require allocating the FCF between different groups in a portfolio and once again we have an arbitrary method that is not very consistent over time because the underlying assets are artificially allocated.

So the problems of this VFA level of aggregation are multiple: first of all, there is a poor representation of the business model, furthermore, the operational implementation is complicated and expensive, since we quickly arrive at an arbitrary allocation and finally, this only leads only to an illusion of accuracy for financial statement users.

Thus, a solution seems to stand out which is to make a different level of aggregation for contracts eligible for VFA which participate in the results of the same underlying elements to be considered as a single group. This would lead to consider only one CSM for all these contracts (if they belonged in the same profitability bucket at inception). This would make it possible to avoid arbitrary allocations of FCF and artificial volatility of the CSM. This recommendation poses a problem for new contracts that are of interest to users of financial statements and that could not be seen with the recommended level of aggregation size. Nevertheless, if needed, some additional disclosures could be required in order to solve this issue, such as the premiums of new business booked in the group over the period, the contribution to the CSM of new business recognized in the group over the period, and finally the allocation pattern of CSM income between three periods - the beginning, end and end of the period in the absence of new business.

(c)	Having considered the technical arguments for those that support and those that oppose the application of annual cohorts to cash-flow matched contracts, as described in Annex 1, and having considered the two views from the EFRAG Board above does the requirement to apply annual cohorts to cash-flow matched contracts meet the qualitative characteristics described above? Please explain your technical reasons for supporting your view.
	☐ Yes ☐ No
	There are no such contracts in France, and we have not assessed this subject.
(d)	Are there any issues that are not mentioned in Appendix II, Annex 1 and the Cover Letter regarding the endorsement of IFRS 17 that you believe EFRAG should take into account in its technical evaluation of IFRS 17? If there are, what are those issues and why do you believe they are relevant to the evaluation?
	NA

Part II: The European public good

Note to the respondents: EFRAG's reasoning and conclusions with reference to all the other requirements of IFRS 17 is presented in Appendix III, apart from the observations on the requirement to apply annual cohorts to intergenerationally mutualised and cash flow matched contracts, which are presented in Annex 1 (refer to the section titled Appendix III in Annex 1).

- In its assessment of the impact of IFRS 17 on the European public good, EFRAG has considered a number of issues that are addressed in Appendix III and Annex 1 regarding the endorsement of IFRS 17.
 - The EFRAG Board has on a consensus basis assessed that, apart from the requirement to apply annual cohorts to intergenerationally-mutualised and cash-flow matched contracts, all the other requirements of IFRS 17 would improve financial reporting and would reach an acceptable cost-benefit trade-off. EFRAG has not identified any other requirements of IFRS 17 that could have major adverse effect on the European economy, including financial stability and economic growth. Accordingly, EFRAG assesses that all the other requirements in IFRS 17 are, on balance, conducive to the European public good.

	in IFRS 17 are, on balance, conducive to the European public good.
(a)	Do you agree with this assessment for all the other requirements apart from the requirement to apply annual cohorts to intergenerationally mutualised and cash-flow matched contracts?
	⊠ Yes □ No
	If you do not agree, please provide your arguments and what you believe the implications of this could be for EFRAG's endorsement advice.
•	EFRAG Board members were split between two groups, as described in the Cover Letter and above, with reference to the requirement to apply annua cohorts for contracts with intergenerational mutualisation and cash-flow matched contracts.
(b)	Having considered the technical arguments for those that support and those that oppose the application of annual cohorts to intergenerationally-mutualised contracts, as described in Annex 1, and having considered the two views from the EFRAG Board above, is the requirement to apply annual cohorts to intergenerationally-mutualised contracts (within the context of paragraphs B67-B71 of IFRS 17) conducive to the European public good? Please explain your technical reasons for supporting your view.
	Implementation of annual cohorts' requirement is arbitrary, very expensive and do not give to financial statements a fair, relevant and reliable information.
	It is entirely inconsistent with the business model and how the intergenerationally mutualized contracts are designed and managed.
(c)	Having considered the technical arguments for those that support and those that oppose the application of annual cohorts to cash-flow matched contracts as described in Annex 1, and having considered the two views from the EFRAG Board above, is the requirement to apply annual cohorts to cash-flow matched contracts conducive to the European public good? Please explain your technical reasons for supporting your view.
	☐ Yes ☐ No
	There are no such contracts in France, and we have not assessed this subject.

Part III: The questions in Part III relate to all the other requirements in IFRS 17 apart from the requirement to apply annual cohorts to intergenerationally mutualised and cash-flow matched contracts

Notes to the respondents: In this Part, "IFRS 17" or "requirements in IFRS 17" or "the Standard" is intended to be referred to all the other requirements in IFRS 17 apart from the requirement to apply annual cohorts to intergenerationally mutualised and cash-flow matched contracts (your views on the latter requirement are to be covered in Part IV).

The European Commission and the European Parliament asked EFRAG to provide its views on a number of specific matters, that are presented below.

Improvement in financial reporting

4	EFRAG has identified that, in assessing whether the endorsement of IFRS 17 is conducive to the European public good, it should consider whether the Standard is an improvement over current requirements across the areas which have been subject to changes (see paragraphs 15 to 27 of Appendix III). To summarise, for all the other requirements in IFRS 17 apart from the requirement to apply annual cohorts to intergenerationally mutualised and cash-flow matched contracts, EFRAG considers that they provide better financial information than IFRS 4.
	Do you agree with this assessment?
	⊠ Yes □ No
	If you do not agree, please provide your arguments and indicate how this could affect EFRAG's endorsement advice.
Cost	s and benefits
5	EFRAG's initial assessment is that taking into account the evidence obtained from the various categories of stakeholders, the benefits of all the other IFRS 17 requirements in IFRS 17 exceeds the related costs.
	Do you agree with this assessment?
	⊠ Yes □ No
	If you do not agree, please provide your arguments and indicate how this could affect EFRAG's endorsement advice.
Othe	r factors
	Potential effects on financial stability
6	EFRAG has assessed the potential effects on financial stability based on the ten criteria set out in the framework developed by the European Central Bank "Assessment of accounting standards from a financial stability perspective" in December 2006. Based on this assessment, EFRAG is of the view that, on balance, IFRS 17 does not negatively affect financial stability (Appendix III paragraphs 428 to 482).
	Do you agree with this assessment?
	☐ Yes ☐ No

If you do not agree, please provide your arguments and indicate how this could affect EFRAG's endorsement advice.

Market consistent measurement are directly affected by short-term market variations. Even for long-term business such as life insurance contracts. This type of evaluation is used for prudential (Solvency II), financial reporting (Embedded Value) purposes. Under IFRS 17, the volatility induced by this measurement principle is artificially amplified by the level of aggregation that is generated by the annual cohorts' requirement (for participating contracts).

Potential effects on competitiveness

(Appendix III paragraphs 227 to 286)

7 EFRAG has assessed how IFRS 17 could affect the competitiveness of European insurers taking into account the diversity in their business models vis-à-vis their major competitors outside Europe.

EFRAG concludes that the underlying economics and profitability will always be more decisive in taking up a business in a particular region or a particular insurance product than changes to the accounting that is used to report on it.

Do you aç	gree with this assessment?
⊠ Yes	□ No
	not agree, please provide your arguments and indicate how this could affect endorsement advice.

Potential impact on the insurance market (including impact on social guarantees)

8 EFRAG has assessed the potential impact on the insurance market in Appendix III paragraphs 287 to 325.

EFRAG commissioned a study from an economic consultancy. This study ('Economic Study') stated that entities may re-consider both their pricing methodologies and product offers when applying IFRS 17 for the first time. The effect on pricing may be more significant than the effect on product offers. However, EFRAG does not have any quantification of the extent of changes in pricing or product design that would result from it.

As per the Economic Study, a majority of stakeholders interviewed (i.e. supervisory authorities, insurers and external investors) agreed that IFRS 17 alone would not impact the asset allocation of insurance undertakings, because this activity is more driven by risk management and/or asset/liability management.

Furthermore, EFRAG has considered how IFRS 17 could affect small and mediumsized entities (SMEs). EFRAG concludes that the number of small insurers that would be affected by IFRS 17 in producing their individual financial statements is very limited (between 27 and 35 depending on the option chosen based on the proposed² EIOPA quantitative thresholds).

² Reference is made to EIOPA's publicly consulted Consultation Paper on the Opinion on the 2020 review of Solvency II to amend the thresholds for applying Solvency II.

	u do not agree, please provide your arguments and indicate how this could affec AG's endorsement advice.
<mark>finar</mark>	don't believe that such a presentation improves the information provided by the ncial statements. Especially for reinsurance arrangements for which a cashosit (e.g.) may be made to mitigate the reinsurer's default risk.

Interaction between IFRS 17 and Solvency II

9

10 EFRAG concludes that in implementing IFRS 17, there are possible synergies with Solvency II, but the extent of such synergies varies between insurers. In addition, no synergies are expected for building blocks that are specific to IFRS 17 such as the

contractual service margin which is not an element of the measurement approach for insurance liabilities under Solvency II. Synergy potential is available in areas that have a high degree of commonality under the two frameworks, i.e. the building blocks for the measurement of the insurance liability needed to establish the cash flow projections, and actuarial systems to measure insurance liabilities. The potential depends, to an extent, on the differences in the starting position of insurers and the investments already made in the implementation of Solvency II. It also depends on the amount of effort to adapt existing actuarial systems, that were developed for the Solvency II environment, to the IFRS 17 reporting requirements. (Appendix III paragraphs 401 to 412).

Saragraphs 401 to 412).

Impact of the new Standard on financial stability, long-term investment in the EU, procyclicality and volatility
On financial stability, refer to the conclusions in paragraph 6 of this Invitation to Comment.
On long-term investment in the EU, EFRAG's view is that asset allocation decisions are driven by a variety of factors, among which external financial reporting requirements might play some part but do not appear to be a key driver. There is no indication that IFRS 17 in isolation would lead to any significant changes in European insurers' decisions on asset allocation or holding periods (Appendix III paragraphs 96 to 123).
On procyclicality and volatility, EFRAG believes that IFRS 17 has mixed effects on procyclicality. IFRS 17 may result in more volatile financial performance measures because of the use of a current measurement. However, from the evidence collected, it is not likely that this volatility has the potential to play a specific role in producing pro-cyclical or anti-cyclical effects. EFRAG also assesses that IFRS 17 does not have the potential to reinforce economic cycles, such as overstating profits and thus allowing dividends and bonus distributions in good times, as there is no linkage between the accounting equity (cumulative retaining earnings) and amounts available for distributions, which are defined within the requirements of Solvency II or within the requirements at national level, independently from the IFRS accounting. Finally, EFRAG notes that the transparent nature of the IFRS 17 information has the benefit for investors to be able to react timely to any changes at hand, thereby avoiding cliff-effects. (Appendix III paragraphs 483 to 507).

IFR	S 17 and IFRS 9
EFR	AG is of the view that mismatches reported by preparers that contributed to AG's assessment do not arise solely from the application of IFRS 17 and IFRS sare mostly economic in nature. EFRAG considers that reporting the extent of the nomic mismatches in profit or loss provides useful information.
dise Whe appl supp cont deci	FRAG's view, asset allocation decisions are driven by a variety of factors and ntangling the impact of accounting requirements from other factors is difficult on defining the accounting for financial assets under IFRS 9, an insurer would not be business models determined in isolation, but rather business models that are portive of or complementary to their business model for managing insurance racts. EFRAG notes that the interaction between each of an entity's internal policy sions will determine the importance of any accounting mismatches remaining in inancial statements and this may differ largely from one insurer to another.
	AG has assessed the different tools that both standards offer to mitigate bunting mismatches. EFRAG assesses that:
(a)	there is no conceptual barrier against the application of hedge accounting in the context of IFRS 17. However, given the lack of experience and systems by the industry, it would require significant investment both in time and systems development to achieve hedge accounting in this context (Appendix III Annex 5);
(b)	the treatment of OCI balances and risk mitigation at transition will not, or balance, negatively impact the usefulness of the resulting information.
(a) [Do you agree with the assessment on the application of hedge accounting?

Api	plication of IFRS 15
of I as tha ins cor tha	some instances, an entity (including insurers) may choose to apply IFRS 15 instead FRS 17 to contracts that meet the definition of an insurance contract but that have their primary purpose the provision of services for a fixed fee. EFRAG concludes to this option would probably be made by those entities that do not operate in the urance business. EFRAG concludes that for these entities accounting for these entracts in the same way as for other contracts would provide useful information and tapplying IFRS 17 to these contracts would impose costs for no significant benefit opendix III paragraphs 68 to 76).
Do	you agree with this assessment?
\boxtimes	Yes
	ou do not agree, please provide your arguments and indicate how this could affect RAG's endorsement advice.
lmį	olications of transitional requirements
ins trai gra info app pos ent mo res cor	nsidering the extent of the information available for each particular group of urance contracts at transition, EFRAG assesses that the existence of three sition approaches does not result in a lack of relevant information. The alleviations need under the modified retrospective approach are still leading to relevant ormation as they enable achieving the closest outcome to a full retrospective olication without undue cost or effort. In addition, EFRAG acknowledges that the sible use of three different transition methods may affect comparability among ities and, for long-term contracts, over time. However, the practical benefits of the diffed retrospective and fair value approach, which were introduced by the IASB to pond to operational concerns of the preparers, may justify the reduced inparability (Appendix II paragraphs 129 to 155, 228 to 237, 300 to 303, 372 to 374, 8 to 400).
Do	you agree with this assessment?
\boxtimes	Yes
	ou do not agree, please provide your arguments and indicate how this could affect RAG's endorsement advice.

Impact on reinsurance

15 EFRAG concludes that the separate treatment under IFRS 17 of reinsurance contracts held and underlying direct contracts reflects the rights and obligations of different and separate contractual positions. Furthermore, EFRAG acknowledges that

reinsurance contracts issued or held may meet the variable fee criteria even though IFRS 17 states that they cannot be insurance contracts with direct participation features. However, EFRAG assesses that the risk mitigation option would largely address the accounting mismatches, thereby balancing relevant information. In addition, for reinsurance contracts held that are used to recover losses from the underlying contracts, EFRAG considers that the Amendments provide relevant information as they aim at reducing accounting mismatches which is present under the original version of the Standard (Appendix II paragraphs 63 to 74, 210 to 216, 274 to 275, 349 to 352, 395 to 397).

Do you agree with this assessment?

	, 0
	Yes 🖂 No
	you do not agree, please provide your arguments and indicate how this could affect RAG's endorsement advice.
	previously mentioned, non-eligibility to VFA for reinsurance contracts should be ldressed.
lm	plementation timeline
eff co ap fro de ac ins wh Eu inf ha	redback from the Limited Update to the Case Studies shows that the delay to the fective date of IFRS 17 to 1 January 2023 results in higher one-off implementation sts for preparers. However, the delay is also helping preparers to adjust their project proaches to the operational difficulties of the Covid-19 crisis. EFRAG understands are preparers that they may choose to avoid these costs by revisiting solution signs or may make more use of internal (cheaper) resources. Furthermore cording to the Limited Update to the Case Studies and other feedback from surance associations, most of the participants did not intend to early apply IFRS 17 hereas a small minority wanted to have this possibility. EFRAG is not aware of any propean insurer having taken a firm commitment to early apply the Standard. Finally FRAG notes that IFRS 17 requires a presentation of restated comparative ormation when applying the Standard for the first time. However, IFRS 9 does not be similar requirements for financial assets and liabilities (Appendix III paragraphs de 609 to 613).
	Do you agree with the assessment relating to delay of IFRS 17 implementation til 23?

annual cohorts to intergenerationally mutualised and cash-flow matched contracts

Notes to the respondents: Respondents are reminded that responses to this Invitation to Comment will be made public on EFRAG's website. EFRAG is also inviting respondents to share quantitative data and to allow confidentiality of this information, constituents are kindly invited to submit these data separately from the Invitation to Comment. Such quantitative data can be sent to ifrs17secretariat@efrag.org. Only aggregated resulting data will be made public in the subsequent steps of the due process and will be presented in an anonymous way.

The intergenerationally-mutualised and cash-flow matched contracts are specified in paragraph 6 of Annex A within Annex 1.

- As stated in paragraphs 5 to 9 of Annex 1:
 - What is the portion of intergenerationally-mutualised contracts and cash-flow matched contracts of all life insurance liabilities and all insurance liabilities? Please report the results for these two types of contracts separately where relevant.

Not assessed by the Institut des Actuaires. You may refer to ANC's answer

(b) Please indicate the proportion of contracts with intergenerational mutualisation (within the context of paragraphs B67-B71 of IFRS 17) for which the requirement around annual cohorts is considered a significant issue. Please specify the share that would qualify for VFA.

Not assessed by the Institut des Actuaires. You may refer to ANC's answer

(c) Please describe the approach you envisage to implement the annual cohorts requirement to contracts with intergenerationally-mutualised contracts (within the context of paragraphs B67-B71 of IFRS 17).

Any approach defined to implement annual cohorts' requirement for intergenerationally mutualised contracts would be arbitrary, artificial and misleading for financial statements' users.

(d) Please indicate the proportion of cash-flow matching contracts for which the requirement around annual cohorts is considered a significant issue. Please

		in Annex A of Annex 1.
		NA
((e)	Please describe the approach you envisage to implement the annual cohorts requirement to cash-flow matched contracts.
		NA
Part V	/: Qı	uestions to Constituents raised in Appendix III
19	As s	tated in paragraphs 532 to 534 of Appendix III:
((a)	In your view, how will the Covid-19 pandemic affect the impacts of IFRS 17 on the insurance market (see a description of some expected impacts in paragraphs 518 to 527 in Appendix III) and indirectly, on the European economy as a whole?
I	Not assessed	
((b)	Is the Covid-19 pandemic affecting your implementation process for IFRS 17 and IFRS 9? Please explain in detail the impacts such as project ambitions, budget for implementation and ongoing costs, resources, speed of implementation. Please also explain whether this relates to the IT systems implementation, or rather the actuarial or accounting aspects of implementation.
	Not assessed	
((c)	Are there other aspects around the implications of Covid-19, not yet addressed in the DEA that you want to expand on?
I	Not assessed	
l Part V	/I· F	FRAG's overall advice to the European Commission
0 I	Do y	you have any other comment on, or suggestion for, the advice that EFRAG is cosing to give to the European Commission?
